

AI Relationship + Homebuyer/Mortgage Advisor for small real estate and mortgage professionals

Working name: **AdvisorFlow AI**

Alternative names: **Namaste AdvisorOS**

1. Product vision

AdvisorFlow AI helps real estate agents, mortgage brokers, and small brokerages turn their existing contacts into warm conversations, advisory opportunities, and closed transactions — without forcing them to become CRM experts.

The key idea:

Existing CRMs store contacts. AdvisorFlow tells the agent **who to contact, why, what to say, what value to provide, and what next step to take.**

This matters because the market already has big CRM platforms. Follow Up Boss positions itself as a real estate operating system that centralizes leads, contacts, automations, phone, reporting, and integrations; it also says strong businesses need systems to follow up with the right leads at the right time. Homebot focuses on long-term homeowner engagement with equity insights, intent signals, and repeat/referral business for real estate and mortgage professionals. So your opportunity is not to copy them. Your opportunity is to make something **simpler, more advisory, more personal, and easier to actually use daily.**

2. Market insight

Real estate professionals are already using technology, but the opportunity is still wide open. NAR's 2025 Technology Survey found that eSignature and social media remain heavily used, and AI-generated content is already used by many agents. HousingWire's summary of the same NAR survey reported that AI adoption reached 68% of agents, but only 17% said AI had a significant positive business impact.

That means agents are trying AI, but they are not yet getting enough **practical revenue impact**.

The biggest pain is not lack of software. It is lack of disciplined follow-up. HousingWire recently summarized the problem well: many deals require 5–12 touches, but many agents stop after only two.

So the product should solve this:

“I have people in my phone, Gmail, past client list, Zillow leads, open house list, and community network. I don’t know who to contact today, what to say, and how to turn it into business.”

3. Target users

Start with a narrow user, not everyone.

Primary user

Solo real estate agent or small broker-owner

Especially someone who has many contacts but weak follow-up discipline.

This includes people like you:

- community-connected
- advisor personality
- not aggressive salesperson
- has real estate, mortgage, insurance, investor, and local network opportunities
- wants AI to guide action

Secondary user

Mortgage broker / loan officer

They need consistent borrower education, realtor partner updates, pre-approval follow-up, and refinance/home equity nurturing.

Third user later

Small real estate teams or immigrant/community-focused brokerages

They need simple systems without paying for expensive enterprise CRMs.

4. Core product promise

The promise should be very concrete:

Every morning, AdvisorFlow AI gives you 5 high-value people to contact, writes the message, explains why, and tracks the next step.

That is the heart of the product.

Not dashboards first.

Not complex CRM first.

Not MLS search first.

Daily relationship action first.

5. Product positioning

Use this positioning:

AdvisorFlow AI is the AI follow-up and advisory copilot for real estate and mortgage professionals who already have relationships but need help turning them into consistent revenue.

Shorter version:

The AI copilot that tells real estate and mortgage professionals who to contact today — and what useful thing to say.

6. What people are looking for from this kind of tool

Real estate and mortgage professionals want:

Need	What they really mean
More leads	"I need more serious conversations."
Better follow-up	"I forget people or don't know what to say."
More referrals	"I want past clients and community contacts to remember me."
Better client education	"I need to explain market, mortgage, buyer agreement, affordability, and next steps."
Less CRM work	"I don't want to spend hours entering notes."

Need	What they really mean
AI help	"I want useful messages, not generic content."
Local authority	"I want to look like a trusted local advisor."
Compliance safety	"I don't want AI saying something risky about mortgage, fair housing, pricing, or guarantees."
Partner workflow	"Agent, mortgage broker, insurance person, and client should not lose track of status."

That is why the product should be **relationship + advisory + next action**, not just "AI writing."

7. MVP requirements

The first version should have only six modules.

MVP Module 1: Contact Import

User can import contacts from:

- CSV / Google Sheet
- Gmail contacts later
- manual entry
- CRM export later: Follow Up Boss, Lofty, kvCORE/BoldTrail, HubSpot

Minimum fields:

Field	Required?
Name	Yes
Email	Optional
Phone	Optional
Category	Yes
Last contact date	Optional
Notes	Optional
Town/city	Optional
Relationship strength	Optional
Real estate stage	Optional

Field	Required?
Mortgage stage	Optional
Next action	Optional

Important categories:

- Past client
- Buyer lead
- Seller lead
- Investor
- Renter
- Landlord
- Mortgage lead
- Refinance lead
- Insurance lead
- Agent recruit
- Vendor
- Community contact
- Business owner
- Referral partner

MVP Module 2: Daily 5 Contact Recommendations

Every day, AI selects **5 people to contact**.

The recommendation should consider:

- last contact date
- relationship strength
- possible real estate need
- possible mortgage need
- life event hints
- town/market relevance
- past client value
- referral potential
- stale lead revival
- open opportunity

- user's preferred style: warm, useful, non-pushy

Output:

Contact	Why now?	Suggested message	Goal	Next step
Raj	Past buyer, not contacted in 14 months	Warm check-in	Reconnect	Ask if they want market update

MVP Module 3: Warm Message Generator

For each contact, generate:

1. short text message
2. email version
3. LinkedIn/Facebook version
4. phone call talking points
5. follow-up if no reply
6. follow-up if they reply positively
7. follow-up if they say "not now"

The tone should be:

- calm
- advisor-like
- helpful
- local
- non-pushy
- no hype
- no fake urgency

Example:

"Hi Raj, hope you and the family are doing well. I was reviewing how Needham values and mortgage rates have shifted and thought of you. No agenda — just happy to send a quick home-value/rent-vs-sell snapshot if useful."

MVP Module 4: Client Advisory Brief

This is where the product becomes more than a CRM.

For any contact, the tool should create a one-page advisory brief:

Buyer brief

- affordability questions
- towns to consider
- mortgage readiness checklist
- buyer agreement explanation
- next 3 steps
- suggested message from agent

Seller brief

- home value range placeholder
- what to prepare
- renovation/staging questions
- timing considerations
- CMA needed
- next 3 steps

Mortgage brief

- pre-approval document checklist
- DTI explanation
- down payment questions
- refinance trigger
- rate/payment education
- next 3 steps

Investor brief

- rental estimate questions
- cap rate / cash flow placeholder
- DSCR readiness
- repair risk

- hold/sell/buy logic
- next 3 steps

This connects to your unique strength: real estate + mortgage + investor + finance thinking.

MVP Module 5: Follow-up Tracker

The system should track:

- message sent
- date sent
- response
- next action
- follow-up date
- status
- opportunity type
- estimated value

Simple statuses:

Status

New

Contact today

Waiting for reply

Replied

Meeting scheduled

Needs CMA

Needs mortgage intro

Long-term nurture

Dead / no opportunity

MVP Module 6: Weekly Revenue Dashboard

Simple weekly dashboard:

- contacts touched
- replies received
- meetings created
- CMA requests
- buyer consults
- mortgage referrals
- stale leads revived
- follow-ups overdue
- estimated pipeline value

The product should make the user feel:

“I know exactly what to do today.”

8. AI requirements

The AI should not just generate text. It should reason about relationships.

AI must do these jobs

AI capability	Requirement
Contact scoring	Rank contacts by opportunity and relationship warmth
Reason generation	Explain why each person is recommended
Message writing	Write text/email/call scripts in user’s style
Follow-up planning	Suggest next step based on response
Lead classification	Detect buyer, seller, investor, refinance, referral, agent recruit
Advisory brief	Create buyer/seller/mortgage/investor next-step plan
Local content	Generate neighborhood/town-specific educational notes
Memory	Remember user tone and previous interactions
Safety	Avoid making guaranteed financial, mortgage, tax, legal, or fair housing claims

AI personality

The AI should sound like:

- trusted advisor

- local expert
- calm operator
- not “sales bro”
- not generic ChatGPT
- not pushy

This is important because many agents do not want canned drip campaigns. They want help sounding human.

9. Compliance and guardrails

This product must be careful because real estate and mortgage are regulated.

Real estate guardrails

The product should help explain written buyer agreements because NAR says many buyers are now asked to sign written buyer agreements, and these agreements outline services and compensation.

The AI should avoid:

- saying commissions are fixed
- implying guaranteed outcomes
- giving legal advice
- making unsupported pricing claims
- steering based on protected classes
- making school-quality claims without sources
- writing discriminatory targeting messages

Mortgage guardrails

The AI should avoid:

- quoting rates unless supplied by licensed source
- promising approval
- giving misleading payment estimates
- omitting assumptions
- saying “you qualify” without lender review
- giving tax/legal advice

Marketing guardrails

The FTC has active guidance around endorsements, reviews, influencers, and testimonials; your product should never generate fake reviews or fake testimonials.

Data guardrails

If later using MLS data, follow real estate data standards. RESO says the Web API is the modern transport standard for real estate data and supports more standardized real estate data movement.

10. Differentiation from current tools

Current tools	Your product should be different by being...
Follow Up Boss	Lighter, AI-first, daily action-focused, easier for solo agents
kvCORE/BoldTrail	Less all-in-one, more relationship intelligence
Lofty	Less lead-gen platform, more warm-network monetization
Homebot	More agent-controlled, message-first, and relationship-task focused
HubSpot	Real estate/mortgage-specific and less complex
Generic ChatGPT	Connected to contacts, history, follow-ups, and pipeline

Your wedge:

We don't replace your CRM. We make your relationships produce revenue.

That is a strong strategy because Follow Up Boss and others already have broad platforms and integrations. Follow Up Boss, for example, emphasizes centralizing leads and contacts, automating follow-up, using AI, and integrating with many lead sources. Competing feature-for-feature would be hard. But building a focused AI layer for "who should I contact today and what should I say?" is realistic.

11. High-level feature requirements

A. User onboarding

The tool asks:

1. What business are you in?

2. Real estate, mortgage, insurance, investing, or all?
3. What towns do you serve?
4. What is your communication style?
5. What are your top goals?
6. How many contacts do you want to touch per day?
7. Do you prefer text, email, phone, or social?

B. Contact management

User can:

- add contact
- import CSV
- tag contact
- add notes
- set relationship type
- set stage
- set follow-up date
- mark response
- archive contact
- search/filter contacts

C. AI recommendation engine

System should calculate:

- contact priority score
- opportunity type
- urgency
- suggested message
- next best action
- reason for recommendation

D. Messaging center

User can generate:

- text
- email
- call script

- voicemail
- social DM
- market update
- referral ask
- thank-you note
- meeting follow-up
- no-response follow-up

E. Advisory templates

Templates:

- buyer readiness
- seller readiness
- refinance readiness
- investor deal review
- landlord portfolio review
- agent recruiting
- vendor referral
- past client check-in

F. Task system

Tasks:

- contact today
- send market update
- prepare CMA
- ask mortgage partner
- schedule consultation
- follow up in 7 days
- add to nurture
- invite to event
- ask for referral

G. Dashboard

Metrics:

- contacts contacted this week

- reply rate
- meetings
- pipeline opportunities
- overdue follow-ups
- top lead sources
- category performance
- next 7-day plan

H. Admin/settings

Settings:

- tone
- business name
- disclaimer text
- service towns
- preferred message length
- compliance mode
- branding
- team members later

12. MVP screens

Start with these screens only:

1. **Today Dashboard**
Shows 5 recommended contacts.
2. **Contact Detail**
Shows notes, category, history, AI summary, next action.
3. **Message Generator**
Creates text/email/call script.
4. **Advisory Brief**
Creates buyer/seller/mortgage/investor plan.
5. **Pipeline Board**
Simple Kanban: Contact Today → Waiting → Replied → Meeting → Opportunity → Closed/Nurture.
6. **Weekly Review**
Shows activity and next week's focus.

That is enough for version 1.

13. Data model

Simple first database:

Users

- id
- name
- email
- company
- role
- service_area
- tone_preference
- goals

Contacts

- id
- user_id
- name
- email
- phone
- category
- town
- notes
- relationship_strength
- last_contacted_at
- next_follow_up_at
- status
- opportunity_type

Interactions

- id
- contact_id
- type: text/email/call/meeting/social
- date
- summary
- response
- next_action

AI Recommendations

- id
- contact_id
- recommendation_date
- score
- reason
- suggested_message
- suggested_next_action

Advisory Briefs

- id
- contact_id
- brief_type
- generated_summary
- assumptions
- next_steps
- created_at

14. Suggested tech stack

Since you already use modern web tools, I would keep it simple:

Layer	Recommendation
Frontend	Next.js / React
Backend	Supabase
Database	Postgres
Auth	Supabase Auth
AI	OpenAI API
File import	CSV first
Email integration	Gmail later
CRM integration	Later via Zapier/API
Hosting	Vercel
Payments later	Stripe

Do not start with mobile app. Start with web.

15. Version roadmap

Version 0: Internal prototype

Goal: help **you** contact 5 people per day.

Features:

- upload 50 contacts
- AI picks 5
- AI writes messages
- track response
- weekly dashboard

Version 1: Real estate agent MVP

Goal: sell or test with 5–10 agents.

Features:

- CSV import
- contact tags
- daily recommendations
- message generator
- follow-up tracker
- buyer/seller advisory briefs

Version 2: Mortgage partner module

Goal: support Shalini/mortgage workflow.

Features:

- borrower readiness checklist
- referral tracking
- pre-approval status
- document checklist
- realtor update message
- refinance/home equity nurture

Version 3: Local advisor intelligence

Goal: make product stronger for Boston-area agents.

Features:

- town profiles
- school/commute prompts
- rent-vs-buy
- affordability assumptions
- market update generator
- CMA prep assistant

Version 4: Integrations

Goal: avoid replacing existing tools.

Integrations:

- Gmail
- Google Contacts
- Google Calendar
- Follow Up Boss
- HubSpot
- Zapier
- MLS/IDX later
- Homebot-style homeowner data later

16. What not to build first

Do **not** build these in the MVP:

- full MLS search
- full CRM replacement
- mortgage rate engine
- loan origination system
- complex marketing automation
- mobile app
- AI calling bot
- full transaction management

- accounting
- e-signature
- team management

Those are too big. The first product should be painfully simple.

17. The first product spec in one sentence

AdvisorFlow AI imports your contacts, identifies your best 5 relationship opportunities each day, writes warm real estate/mortgage messages, creates simple advisory briefs, and tracks follow-up until the relationship becomes a meeting, referral, or transaction.

18. Success metrics

For your own use, measure:

Metric	Target
Contacts imported	100+
Daily contacts recommended	5
Messages sent per week	25
Reply rate	20%+
Meetings booked per month	4+
Real opportunities per month	2+
Time spent per day	Under 20 minutes

For paid users, measure:

Metric	Target
Weekly active users	60%+
Contacts touched per user/week	15+
AI messages accepted	50%+
Follow-up completion rate	70%+
User-reported conversations created	5+ per month

19. My recommended product vision statement

Use this:

AdvisorFlow AI exists to help trusted local real estate and mortgage advisors grow through relationships, not cold pressure. We combine AI, contact intelligence, and simple daily action plans so professionals know who to contact, what to say, and how to guide each client toward the right next step.

20. Your immediate build plan

Start with the smallest version:

Build this first

1. Login
2. Upload contacts CSV
3. Contact list
4. "Generate Today's 5" button
5. AI reason for each contact
6. AI text/email message
7. Mark as sent
8. Add response
9. Set next follow-up
10. Weekly summary

That is your MVP.

The magic is not the interface. The magic is the daily AI decision:

Who should I contact today, why, and what should I say?
